

Advatech Pacific Continues International Expansion of Communications Interoperability Product, Partners with Key Regional Dealer in South East Asia

Company Expanding Marketing Operations with DefTecSys, Inc.

REDLANDS, Calif. - June 22, 2010 – Advatech Pacific, Inc. today announced its continuing international marketing expansion with the partnership of Paul E. Buenaventura of DefTecSys, Inc. located in Pasig City, Philippines. This strategic partnership will enable Advatech to provide its communication interoperability technology to an unrefined South East Asian communications interoperability market.

“The South East Asian market is an excellent opportunity for Advatech’s communication interoperability technology,” said Ken Moore, Vice President Business Development, Advatech Pacific, Inc. “Radio manufacturers did a good job selling different types of radios all throughout the region, thus creating a communication nightmare when disparate agencies need to talk to one another at the time of a disaster, when communication is most critical. There is a high demand for communication coordination in the Philippines where even the same departments in some cases have different radios. ”

Advatech Pacific’s family of communications interoperability equipment, branded as Universal Gateway to Telecommunications Equipment (uGATE)[®], provides instant interoperability between different radio networks by simply connecting one radio from each network into the unit and pressing the power button. Priced well below its competitors, uGATE[®] allows first responders to establish communications with any communication means that are present at the response to a disaster, or during joint agency or military operations.

Advatech’s uGATE[®] is an audio bridge that allows any combination of voice devices to be interconnected using smart cables. The uGATE[®] products line provides an inexpensive and convenient communications interoperability solution for the fire and police departments as well as other first responders. It allows these first responder agencies and authorities to be fully interoperable with other federal, state and local agencies, and even the National Guard and the Military. In addition, uGATE[®] integrates legacy equipment, is easy to use, is rugged and reliable, and is independent of infrastructure.

The launch of distribution partnerships in South East Asia further demonstrates Advatech’s ongoing commitment to expanding its international business, and developing its brand recognition within the communications interoperability market in new regions around the world. It’s newly acquired partnership with DefTecSys, Inc. is just one of many newly established international distribution centers for the uGATE[®] product line, which now includes presences in Canada, South and Central America, Singapore, Malaysia, Brunei, Indonesia, United Arab Emirates, and the Philippines.
